

Exp No : 02 Defining Governance Structures – Business Units and Liabilities

Aim

To establish basic governance structures in the Eramba GRC platform by creating a business unit and defining an organizational liability with responsible contacts and related information.

Procedure

1. Log in to the Eramba GRC platform and open the Organization section.
2. Navigate to Business Units and select Add Item.
3. Create the business unit named **Software Engineering** and provide a description of its responsibilities.
4. Assign the available user **Madhan** as the Business Unit Contact and save the record.
5. Open the created business unit and verify its name, description, contact, potential liabilities field, and dynamic status.
6. Navigate to Organization → Liabilities and select Add Item.
7. Create the liability named **Customer Data Protection** and enter a description explaining the responsibility for protecting customer information.
8. Assign **Madhan** as the Liability Contact and save the liability.
9. Open the liability record and verify its name, description, contact, and risk magnifier information.

Output

The Software Engineering business unit and Customer Data Protection liability were successfully created in Eramba. Their details were opened and verified from the respective Organization sections.

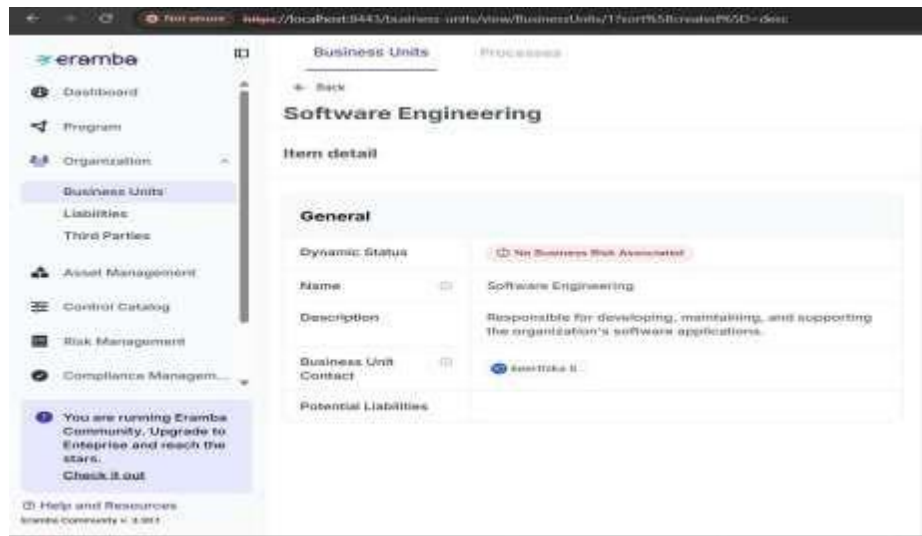

Fig 2.1 – Software Engineering Business Unit Details

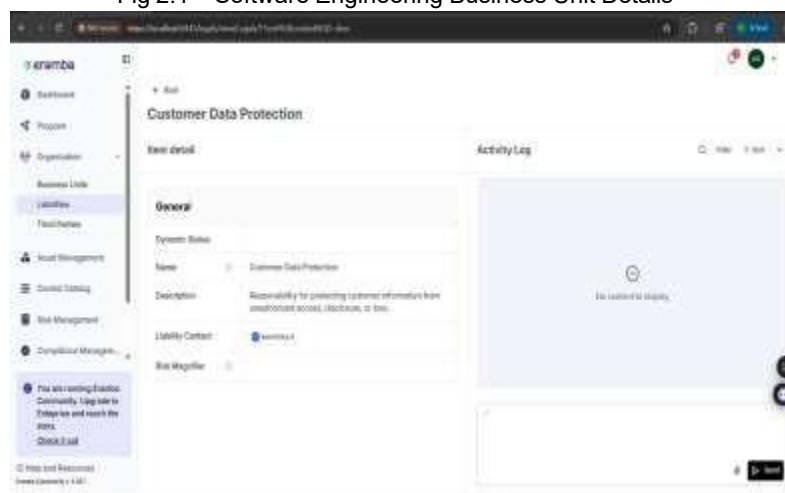

Fig 2.2 – Customer Data Protection Liability Details

Result

The governance structure was successfully configured in Eramba by establishing the Software Engineering business unit and the Customer Data Protection liability. Both records were saved successfully and their details were available for verification.
