

Exp No: 04

Executing Qualitative Risk Assessments

Aim

To perform a qualitative assessment of an identified business risk in Eramba by reviewing its risk classification, likelihood level, calculated risk score, and applicable risk threshold.

Procedure

1. Open **Risk Management** → **Business Risks** in the Eramba dashboard.
2. Open the previously created **Cloud Service Availability Risk** record.
3. Review the **Analysis** section of the risk record.
4. Verify the business unit and linked threat and vulnerability information.
5. Review the configured risk classification and likelihood.
6. Verify the automatically calculated risk analysis score and associated threshold.
7. Confirm that the assessment details are saved and displayed correctly.

Output

The Cloud Service Availability Risk was reviewed successfully. The record displayed the Technology risk category, Occasional likelihood classification, a calculated risk analysis score of 5, and the Standard Risk Tolerance threshold.
