

Exp No : 05 Implementing Controls & Compensating Control Attestation

Aim

To implement an internal security control in Eramba and configure its audit and attestation information so that the control can be reviewed against defined audit criteria.

Procedure

1. Open **Control Catalog** → **Internal Controls** in the Eramba dashboard.
2. Create the internal control **Multi-Factor Authentication Enforcement**.
3. Enter the control description and assign the available GRC Contact and Control Operator Contact.
4. Associate the control with the relevant security policy.
5. Open the created control and review its General and Audits sections.
6. Open the audit record for the control and verify the planned and actual audit dates.
7. Review the audit result and conclusion shown for the audit.
8. Verify the audit owner, evidence owner, audit methodology, and success criteria.
9. Save the configuration and confirm that the control and audit information are available in Eramba.

Output

The Multi-Factor Authentication Enforcement control was successfully created in Eramba and an associated audit record was configured. The control details, audit result, conclusion, and audit dates were displayed for verification.
