

Exp No: 06

Risk Treatment and Risk Exceptions

Aim

To manage an identified business risk in Eramba by reviewing its existing assessment, assigning an appropriate treatment strategy, associating supporting controls and policies, and documenting a related risk exception.

Procedure

1. Open Risk Management → Business Risks and select the previously created **Cloud Service Availability Risk**.
2. Review the existing risk analysis, including its classification, likelihood, score, and threshold.
3. Open the Treatment section for the risk.
4. Set the risk treatment to **Mitigate**.
5. Associate the existing **Multi-Factor Authentication Enforcement** internal control with the treatment.
6. Associate the relevant authentication/security policy with the treatment.
7. Save the treatment configuration.
8. Navigate to Risk Management → Risk Exceptions.
9. Create a risk exception with an appropriate description, requester/contact, expiration date, and status.
10. Verify the treatment and exception records in Eramba.

Sample Risk Exception Data

Field	Value
Exception Name	Temporary Cloud Monitoring Exception
Description	Temporary exception for a monitoring coverage gap while centralized service monitoring is be improved.
Status	Open
Requester / Contact	keerthika S
Expiration Date	31-10-2026

Output

The Cloud Service Availability Risk is prepared for treatment using existing project controls and policy support. A sample risk-exception record is also defined for documenting a temporary deviation.

The image shows a screenshot of a web-based form for recording a cloud service availability risk. The form is titled "Cloud" and is dated "10 Jan 2020". It is divided into several sections: "General", "Analysis", "Treatment", and "Risk Response Plan". The "General" section includes fields for "Risk ID", "Risk Name", "Risk Category", "Risk Severity", "Risk Status", and "Risk Owner". The "Analysis" section includes fields for "Risk Description", "Risk Impact", "Risk Likelihood", "Risk Exposure", "Risk Mitigation", and "Risk Acceptance". The "Treatment" section includes fields for "Treatment Description", "Treatment Owner", "Treatment Status", and "Treatment Due Date". The "Risk Response Plan" section includes fields for "Risk Response Plan", "Risk Response Owner", "Risk Response Status", and "Risk Response Due Date". The form is currently empty, with only the "Risk ID" field containing the value "RISK-0001".

Result

The business risk treatment workflow and risk-exception documentation process were prepared in Eramba using the existing risk and internal control records. The final treatment and exception screenshots should be added after the corresponding entries are saved in the system.
