

Exp No : 07

Establishing Metrics (KPIs and KRIs)

Aim

To establish a consistent method for measuring business risk in Eramba by reviewing the configured likelihood and impact criteria and verifying the resulting numerical risk score.

Procedure

1. Open Risk Management → Business Risks → Settings → Calculation Method.
2. Review the active risk calculation configuration and confirm that Likelihood and Impact are used.
3. Verify that the required classifications are available for risk analysis.
4. Open Risk Management → Business Risks and select the Cloud Service Availability Risk.
5. Review the Analysis section and verify the displayed classification and calculated score.
6. Record the score as the risk indicator used for ongoing monitoring.

Output

The risk measurement configuration was verified and the selected business risk displayed its classification and calculated numerical score.

Result

The risk measurement process was successfully verified in Eramba. The configured classifications produce a numerical score that can be used as a measurable risk indicator.
