Audit Planning and Issue/Findings Management

Aim

To plan and document an internal control audit in Eramba, record its outcome, and maintain an associated issue or finding for follow-up and corrective action.

Procedure

1. Open Control Catalog → Internal Controls → Audits.
2. Review the audit associated with the Multi-Factor Authentication Enforcement control.
3. Verify the audit methodology, success criteria, assigned owners, and audit dates.
4. Review the recorded audit result and conclusion.
5. Navigate to Control Catalog → Internal Controls → Issues.
6. Review or create the MFA Evidence Review Gap finding associated with the control.
7. Verify the finding description, responsible contact, status, and dates.
8. Review the audit and issue registers to confirm that the records are properly maintained.

Output

The internal-control audit record contains the audit criteria, owners, dates, result, and conclusion, while an associated issue record supports follow-up of corrective action.

Result

Audit planning, result documentation, and issue management were successfully demonstrated in Eramba. Audit findings can be tracked separately until the required corrective action is completed.
